WETLAND SOILS

Map prepared on 6/16/00 by Kirk Sinclair, GIS Manager, HVA

Parcel data obtained from HVCEO. Soils data obtained from DEP through the MAGIC web site.

This map is meant only to be a guide for the larger wetland systems within the Town of New Milford. In all cases, the precise location of regulated areas shall be determined by the character of the land, the distribution of wetland soils types and the locations of watercourses. Such determinations shall be made by field inspection and testing conducted by a soils scientist where soil classification are required, or where watercourse determinations are required, by qualified individuals. If a person has any question they may consult with the wetlands staff.
